

EUCAST Engages Castle Placement in Private Equity Offering

International Telecommunications Innovator Entering U.S. Marketplace

NEWS RELEASE BY EUCAST

Denver, CO | August 09, 2022 10:00 AM Eastern Daylight Time

EUCAST Global, an advanced wireless LTE, CBRS, and 5G telecommunication company announced it has engaged Castle Placement to lead its capital raising initiative.

EUCAST provides wireless communication systems that allow users to access the internet whenever and wherever they want. Its advanced equipment, comprising base stations, application servers, core network, and network management systems, allows users in remote and underserved communities to access the internet. EUCAST also provides private network solutions for businesses that share confidential information and digital twin capabilities.

EUCAST is working to equip private and public entities to launch private networks, expand coverage, providing high availability and low latency solutions for users and devices alike.

In the private sector, EUCAST will be providing manufacturing, industrial, oil and gas, and mining industries with a turn-key complete coverage private network solution using CBRS and 5G spectrum on their sites. The company provides stationary and portable wireless communication systems that allow users to access the internet whenever and wherever they want – bridging the immediate need for digital technology without the process of installing complicated, costly, and time-consuming infrastructure tower projects or deep fiber extensions. EUCAST 5G base stations are also critical for the deployment of smart poles as part of the smart city initiatives that is happening throughout the U.S.

In the public sector, EUCAST offers communication service opportunities for rural areas, including schools and medical facilities, as well as sovereign tribal communities and nations that have been largely ignored by the large telecommunication carriers. Both federal and state governments have identified the lack of broadband access as a significant problem and are deploying funds to provide digital equity in America.

EUCAST recently adapted its network in a box technology for drone deployment which will allow for recovery of urgent communication capabilities in the event of emergencies or service interruptions where no communication coverage is available.

“EUCAST technology is a solution for service disruptions,” Gary Sumihiro, EUCAST Executive Vice President and Board Member explained. “Our technology allows for continuous communication among users even in the event of emergencies and carrier service interruptions – with a complete

network that fits into a backpack, car or ship version, and now drones. We are excited to be working with Castle Placement and bring these opportunities to expand our U.S. operations.”

EUCAST is in discussions with many companies and public entities for the deployment of their technology.

Castle Placement will be assisting EUCAST on its private equity offering. Specific information on investment opportunities is available here:

<https://castleplacement.com/portfolio/eucast-global/> .

“EUCAST solutions should be attractive to investors today,” explained Harish Pillai at Castle Placement. “EUCAST’s proven technology solves digital equity issues and enables communications that were previously considered impossible. As more public and private sector entities engage, it is becoming abundantly clear, from farming, security, production, and emergency response, the possibilities are significant. We look forward to inviting our investors to be a part of this opportunity.”

EUCAST Global is part of the **Colorado Smart Cities Alliance** and recently announced a partnership with the **University of Denver**.
