

Sumihiro Investments is pleased to announce the U.S. entry of SunFleur, a South Korean company, that is reimagining solar energy capture.

SunFleur has created a vertical window solar panel that works in harmony with overall building design while capturing 65% more solar energy than other designs.

SunFleur is the leader in integrating a total 5G IoT solution that measures overall load, energy distribution, temperature, wind and other environmental factors. SunFleur has partnered with Colorado State University Engineering Powerhouse Campus for the installation of its first US solar panel.
